DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 2, 3 and 6, drawn to monitoring the output of a plurality of power sources, are classified in class 713, subclass 340.
- II. Claim 4 and 5, drawn to controlling power to a reset control unit for resetting a computer, classified in class 713, subclasses 1 and 300.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the function of the combination as claimed is to monitor the outputs of a plurality of power sources in a system and to reset the system when one of the outputs is not acceptable. The subcombination has separate utility such as controlling when power is applied to a reset control unit for resetting a computer system.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. David G. Posz on 3/15/04 to request an oral election to the above restriction requirement, but did not result in an election being made.
